****This information is also fully reflected with better structure in this G Doc link:**
[COMPREHENSIVE GOOGLE DOC LINK](#)

Shane's H2 2021 Product Design Self-Review

2 Pager Summary

Product Impact

Automated App Ads (AAA vs AAA) Split Testing Enabling

AAA Split Testing Build Plan ([G Doc](#) / [Figma Doc](#)) || [Context / Current Entry Points](#) || [AAA product Share Out Slide Deck](#)

Context: Split testing ([28% of app ads revenue](#)) for AAA ([\\$3.25B run rate + 29% adoption rate](#)) vs AAA is not fully supported on our Ads Manager which increases AAA's churn rate and results in a mediocre AAA performance.

Outcome:

- The AAA split test is designed for an **end-to-end “Production Ready” state and “Ideal” state**
- ENG and UXR is **unblocked - begin testing in Early January** and develop initial build in H1 2022

How did I drive product outcome?:

- I was the project owner - leading all milestones, product-level decisions, wireframes, design briefs, and share outs
- I also lead the partnership between the A/B test & AAA team, discussing with their ENG for the initial build

App AEM Guidance on Ads Manager

Project [Context](#) || Full Project Design Index - [Full Microsite](#)

Context: App AEM **optimizes app events for delivery on iOS 14.5+ devices, improving reporting accuracy for [ads with \\$7.57M](#) of daily revenue**. However, we don't provide guidance of this behavior improvement in the creation flow.

Outcome:

- The App AEM information notices were fully designed for L3-L1, the reporting table,

and Commerce Manager.

- The design has **passed the product and design alignment AIP phase and been approved to [100% public rollout](#)**

How did I drive product outcome?:

- With CD, I converted the designs from solely warnings to a series of guidance & warnings in all surfaces

**** (my original scope was L1 only)**

- New design strategy to gauge full user intent before surfacing warnings and auto-defaults for multiple selectors

App AEM Implementation on Post Click Experiences Design

Most Updated Design ([10/27 Crit Format Shareout](#))

Context: Our DA team worked on refining a design to align App AEM design to Post Click Experience's ([goal of 75% optimal and resilient revenue in next 3 years](#)) new surface in L1 for Sales OBJ.

Outcome:

- The project will **merge with the “Refine DA”** portion of DA's roadmap, effectively merging the Catalog and Conversion Sales objective ([40% of Meta Inc revenue from Conversions](#)).
- **This project will be spearheaded by my L1 destination design solution**

How did I drive product outcome?:

- By obtaining design feedback from three different teams, I was able to identify a lack of information parity amongst all parties allowing us to strategize a more finalized solution in the future than build interim solutions

Design Excellence

App AEM Warning System Design

Project [Context](#) || Full Project Design Index - [Full Microsite](#) || [Full Delivery Behavior Information/ Warning Hierarchy Chart](#)

Solution:

- **a notification system** based off user's AEM eligibility, destination selections, and prior selections in L3 and L2
- **default auto-selection** of deep link destination (DLD) and mobile app based off AEM eligibility and usage data

Design Excellence Highlights:

- With CD, I organized **over 40 design variants (20+ variants in just L1)** across 4 Ads Manager layers and Commerce Manager over the entire product journey

A/B Test Framework (Question Based Setup- QBS) Remodel for Automated App Ads Testing

[User Flow Final \(Ideal State\)](#) || Question based Setup Framework ([A/B Team's File](#))

Solution:

- A/B test team's **design re-model** to fit our **4 specific variable test cases** based on advertiser's feedback
- The testing includes a design that **solely tests between campaign(s) and a duplicating campaign entry point**

Design Excellence Highlights:

- I collaborated with A/B test's DES, validating changes to QBS for **a full user journey that match AAA's use case**
- **Three chronological phase solution**, ensuring design craft / usability on Ad Manager and Experiment tool surfaces

App AEM Integration for Post Click Experiences

[Proposed Design \(10/27\) - Crit Shareout Format](#) || [Current PCE Format](#)

Solution:

- The design added a **fourth destination (catalog configuration)** and revamped the **selector hierarchy and labelling**
- The design components provide **grouping** for selectors and **flexibility** on reducing and expanding options

Design Excellence Highlights:

- The most updated design establishes a **step by step process**— initially choosing a destination to supplementing the choice with multiple destination & deeplink options, building a **more digestible format**
- This design called for **Catalog appField validation**, boosting **user guidance on content and product design end**

Strategy

DA Roadmap Adjustment

[DA Roadmap](#) / [Shane's Most Updated Design](#)

Outcome:

- Cease developing an interim solution and **reach for feature parity in the "Redefine DA" roadmap plan**
- Dynamic Ads team instated a **monthly design sync/feedback**

How was I involved?:

- The 'Refine DA' portion of DA's roadmap of Q2 2022 will be **built off my catalog L1 destination design solution.**

- My design and product knowledge **helped to decide the allocation between an interim and more finalized solution** and also expedited the three teams to fully understand each team's stakeholding

Initial Build State Negotiation for AAA vs AAA Split Testing

AAA Split Testing Build Plan ([G Doc](#) / [Figma Doc](#))

Outcome:

- Our initial build will use the **identified entry point (duplication) and cover three out of four major use cases** without campaign grouping

How was I involved?:

- **I lead the full partnership with A/B test team's ENG**— constructing product decisions for our initial build and indexing all our ideal AAA functionalities
- Through PMM insights, I matched **highest impact vs projected engineering feasibility** with our and A/B team's ENG, constructing our H1 ready to build design and an ideal end-state.

People

Advertiser Automation Branding ([Figma File Link](#) / [Slide Deck Template](#) / [Workplace Shareout](#))

- I created the Advertiser Automation (AA) team logo and fully aligned it with AP Pillar's branding guidance. I also collaborated with Meaghan Li (PD) to make a slide deck template for AA and was used for our very first All Hands.

Advertiser Automation Social ([Planning File](#) / [Team Picture](#))

- I organized the first AA social with a monthly social plan in 2022. First social used a Figma plugin called Figtionary.

Cross-Team and XFn Collaboration

- AAA Split Testing Brainstorm (["Team Info Collation \(brainstorm work from PD Shane\)"](#))
- DA Monthly Sync ([Sync Link](#))
- Creative DA Video Template ([Template Iteration Link](#))
- AAA Guidance and Upsell Brainstorm([Brainstorm Link](#))

Growth Areas

Sharing My Design Process: I would like to focus on sharing my design process to diverse audiences and clearly conveying the context, design changes made, and my rationale. This could be achieved through **new AIP processes, more CRIT sessions, and future product share outs.**

Project Planning: I want to mirror my experience as a project owner on AAA defining project “scope”: milestone estimation, design journey, etc— **increasing my leadership skills / collaboration with xFN**. This could be achieved by aligning early in the project process with all xFN and volunteering to drive meetings and ask product-level questions.

Future Experiences

Product Strategy / Roadmap Involvement: I would like to focus on contributing to the **structure, project planning, and definition of product roadmaps**. Forms of success would be to physically **add aspects to project roadmaps or become a lead/domain expert for products and product features**.

Collaboration with Product Designers: I look forward to directly brainstorming, designing, and cross-cutting design work with PD on my immediate and xFN teams. Forms of success would be to **work on more projects with other PDs and also increase visibility of my projects / design process to other PD for feedback and growth**.

Shane’s H2 2021 Product Design Self-Review

Expanded Work Index

Product Impact

Automated App Ads (AAA vs AAA) Split Testing Enabling

Links:

- AAA Split Testing Build Plan ([G Doc](#) / [Figma Doc](#))
- [Context / Current Entry Points](#)
- [AAA product Share Out Slide Deck](#)

Context:

Split testing ([28% of app ads revenue](#)) for AAA ([\\$3.25B run rate + 29% adoption rate](#)) vs AAA is **not fully supported** on our Ads Manager. Advertisers **don’t have a clear method to increase the performance of their AAA** which evidently **increases AAA’s churn rate and a less than ideal AAA performance**.

Outcome:

- The AAA split test is **designed into an end-to-end “Production Ready” state and “Ideal” state** (initial build and any milestones thereafter)
- ENG is unblocked and will develop the initial build in H1 2022, supporting **three use cases** (ex: [grouping use case](#)) from the aligned entry point
- UXR will begin testing in Early January as well

How did I drive product outcome?:

- **I was the project owner** - detailing all milestones, design briefs/contexts, and leading this project shareout for the app ads space

- **I also lead the partnership** between the A/B test team and our AAA project team, driving all meeting agendas and collaborating with their engineer POC on product-level decisions for the initial split test build.
- **All wireframes were designed by me** and aligned with A/B's design POC as well.

App AEM Guidance on Ads Manager

Links:

- [Context](#)
- [Full Microsite](#)

Context:

App AEM enables app deep linking and **improves reporting accuracy for ads with \$7.57M of daily revenue, optimizing app events for delivery on iOS 14.5+ devices.** However, we don't have a discoverable way to inform advertisers of this behavior improvement in the creation flow.

Outcome:

- The App AEM information notices were fully designed for L3-L1, the reporting table, and Commerce Manager.
- The design has **passed the product and design alignment AIP phase and been approved to 100% public rollout.**

How did I drive product outcome?:

- With CD, I converted the designs from solely warning propagation to a series of information notices & warnings, reducing the number and complexity of warnings in all surfaces above **(my original scope was L1 only)**
- New design strategy to wait for full user intent before propagating warnings and creating auto-defaults for multiple selectors

App AEM Implementation on Post Click Experiences Design

Links:

[10/27 Crit Feedback from Advertiser Automation DES team](#)

Context:

Our DA team worked on refining a design to align App AEM design to Post Click Experience's **(goal of 75% optimal and resilient revenue in next 3 years)** new surface in L1 for Sales OBJ.

Outcome:

- The project has been postponed and will merge with the "Refine DA" portion of DA's roadmap of Q2 2022, effectively merging the Catalog and Conversion Sales objective into one **(40% of Meta Inc revenue from Conversions).**
- This project will be spearheaded by **my L1 destination design solution.**

How did I drive product outcome?:

By obtaining design feedback from three different teams as I was building the solution, I was able to **identify a lack of information parity** amongst all parties allowing us to allocate our resources to a more finalized solution in the future than build more interim solutions.

Design Excellence

App AEM Warning System Design

Links:

[“PQE review- A6859 \(Final DES Archive\)” FULL Figma Microsite](#)

[Full Delivery Behavior Information/ Warning Hierarchy Chart](#)

Problem:

Web AEM was launched in H1 2021, and now launching App AEM, which will allow advertisers to optimize app events for delivery on iOS 14.5+ devices. However, we don't have a discoverable way to inform advertisers of this behavior improvement in the creation flow.

Solution:

- **a notification system based off user's AEM eligibility**, destination selections, and prior selections in L3 and L2
- default auto-selection of deep link destination (DLD) and **mobile app based off advertiser's AEM availability and past usage data**
- **additional fourth option** for the DLD selector (**deeplink based off catalog configuration**)

Design Excellence Highlights:

- With CD, I was able to **organize over 40 design variants (20+ variants in just L1)** across 4 Ads Manager layers and Commerce Manager over the entire product journey
- This design **required rethinking warning delivery/information delivery** to our users due to exponential complexity of the warning from each layer's prior selections.

A/B Test Framework (Question Based Setup) Remodel for Automated App Ads Testing

Links:

[User Flow Final \(Ideal State\)](#)

Question based Setup Framework ([A/B Team's File](#))

Problem:

Split testing for AAA vs AAA is not fully supported on our Ads Manager. The variable selections do not match the advertiser's needs and AAA's unique cardinality rules **force unconventional actions that aren't fully illustrated to the user.**

Solution:

- I leveraged the A/B test team's split test design (Question Based Framework) to fit **4 specific variable test cases** based on advertiser's feedback.
- AAA vs AAA testing includes a design that solely tests between campaign(s) and a duplicating campaign entry point

Design Excellence Highlights:

- This design required collaboration with A/B test's design POC, validating changes to the original framework to **create a full user journey that match AAA vs AAA's use case**
- The solution was partitioned **into three chronological phases**, ensuring **design/interaction craft and usability on different Ad Manager and Experiment tool surfaces**

App AEM Integration for Post Click Experiences

Links:

[Proposed Design \(10/27\) - Crit Shareout Format](#)

[Current PCE Format](#)

Problem:

CD and I re-designed destination selection experience for the Product Catalog Sales Objective. Post-Click Experiences team was simultaneously developing a design that enveloped the entire post-click destination. Their design and our design needed to be fully aligned.

Solution:

- The new design added a **fourth post-click destination** (catalog configuration) and **revamped the selector hierarchy and labelling** to reduce setup complexity while maintaining feature parity.
- The design components were also improved to **provide grouping for selectors and flexibility on reducing and expanding options**

Design Excellence Highlights:

- This design required adding more **usability and performance functionalities yet simplifying the user interactions** to reduce information overload
- The most updated design establishes a **step by step process**— initially choosing a destination and then supplementing the choice with multiple destination and deeplink options, building a more digestible format for advertisers.

Strategy

DA Roadmap Adjustment

Links:

[DA Roadmap](#) / [Shane's Most Updated Design](#)

Context:

Our Dynamic Ads (DA) team designed an integration of App AEM to Post Click Experience's (PCE) new surface in L1 for Catalog Sales OBJ. We were notified of omni-channel delivery for Conversions OBJ which doesn't exist for Catalog OBJ. However, DA's 2022 roadmap includes fusing these objectives (ODAX) asking for alignment between three parties: Cross Channel Optimization, DA, and PCE team.

Outcome:

- We opted not to allocate effort to an interim solution and **retained the decision for a fuller effort in achieving feature parity** for the combined OBJ in H2 2022.
- Dynamic Ads team instated a **monthly design sync**/feedback.

How was I involved?:

- The 'Refine DA' portion of DA's roadmap of Q2 2022 **will be built off my catalog L1 destination design solution**.
- My design and product knowledge helped to **decide the allocation between an interim and more finalized solution** and also expedited the three teams to fully understand each team's stakeholding.

Initial Build State Negotiation for AAA vs AAA Split Testing

Links:

AAA Split Testing Build Plan ([G Doc](#) / [Figma Doc](#))

Context:

AAA split testing was not fully enabled due to lack of support on key use cases and its cardinality on similar campaigns. Despite the salience of the project need, initially there was not a solidified scope and framework to fulfill the designs.

Outcome:

- Our initial build will use the **identified entry point (duplication) and cover three out of the four key use cases** identified by advertisers
- Our initial build will not cover campaign grouping

How was I involved?:

- I lead the full partnership with A/B test team's ENG— **constructing product decisions** for our initial build and indexing all our ideal AAA functionalities
- Through PMM insights, I **matched highest impact vs projected engineering feasibility** with our and A/B team's ENG, constructing our H1 ready to build design and an ideal end-state.

People

Advertiser Automation Branding

- I created the Advertiser Automation (AA) team logo and fully aligned it with Advertiser Product Pillar's branding guidance.

- collaborated with Meaghan Li (PD) to make a slide deck template for AA and was used for our very first All Hands.
- [Figma File Link](#) / [Slide Deck Template](#) / [Workplace Shareout](#)

Advertiser Automation Social

- I organized the first Advertiser Automation social with a plan for monthly socials in 2022, balancing between game-based and discussion-based events
- First social used a Figma integration called Figtionary
- [Planning File](#) / [Team Picture](#)

Cross-Team and XFn Collaboration

- AAA Split Testing Brainstorm
 - I lead a full team brainstorm to determine the project's scoped entry point, discussed my early iteration user flow, and knowledge-share.
 - [“Team Info Collation \(brainstorm work from PD Shane\)”](#)
- DA Monthly Sync
 - I set up a monthly sync with all DA product and content designers to share project updates and faster feedback without context buildup.
 - [Sync Link](#)
- Creative DA Video Template
 - Collaborated and brainstormed with Ashlee on revamping video templates for ads with a product catalog
 - [Template Iteration Link](#)
- AAA Guidance and Upsell Brainstorm
 - Actively Participated with xFN to come up with ideas on AAA adoption increase opportunities during different advertiser interaction stages
 - [Brainstorm Link](#)

Growth Areas

Sharing My Design Process

One aspect I would like to focus on in the next half is sharing my design process to numerous audiences and clearly conveying the context, design changes made, and my rationale.

This could actionably be done through **new AIP processes, more CRIT sessions, and future product shareouts**. I can receive open support through clear feedback on what points of my delivery were difficult to understand and how to improve it (ex: visual representations, shorter context, etc).

Project Planning

As product owner for the AAA split testing experience, I learned to define the project “scope”: milestone estimation, design journey, etc. **I want to mirror this experience, increasing my leadership skills and collaboration with xFN.**

This could actionably be done, taking initiative early in the project process to align with all xFN parties on responsibilities and asking everyone to be involved in the design process. I would also volunteer to drive meetings and ask product-level questions..

Future Experiences

Product Strategy and Roadmap Involvement

One aspect I would like to focus on long term is contributing to the **structure, project planning, and definition of product roadmaps.**

- As I continue to develop wider domain knowledge and interaction expertise, I hope to attain the role of not only **impacting product-level decisions** but also the **strategy phases** of long term vision planning (ex: impact measurement plan).

Forms of success would be to **physically add aspects to project roadmaps or become a lead/domain expert for products and product features.** I can be supported through more opportunities in shadowing/participating in roadmap planning sessions.

Collaboration with Product Designers

Another quality I would like to focus on long term is **directly brainstorming, designing, and cross-cutting design work with PD** on my immediate and xFN teams.

- I have attained experience this half working with numerous CD and ENG, but I have not directly worked with PD aside from a mentorship and product decision alignment perspective.
- I want to increase my ability to **lead, inform, and design with other PDs** to expedite workflows and have eyes on numerous perspectives for each design choice.

Forms of success would be to work on more projects with other PDs and also increase visibility of my projects / design process to other PD for feedback and growth.

Shane Yun • Product Designer

Submitted 2023-01-10

Freeform feedback

2022 Product Design Self-Review (ABRIDGED VERSION)

PRODUCT IMPACT, STRATEGY, AND DESIGN EXCELLENCE

App AEM V2 {March 2022 - Present} || [AIP](#) | [Figma](#) | [Setup Messaging Figma](#) | [Product Brief](#)

I lead the product strategy and design execution across app engagement (~7% of total ads Meta revenue).

Product Impact

- **Lead design** across App Engagement {Dynamic Ads, Advantage+ Shopping, Sales, Leads, Engagement}
- **Designs undergone lead reviews** for Advertiser Product, MMT, Core Ads, and Xiaoduan {Ex-MMT director}
- **Lead cross-team alignment with 6 teams:** 3 MMT & Signals, 2 Core delivery, and 1 CXP (*refer to expanded version for full details)

Strategy

- **Lead design solution** for app engagement - app/app event level criteria, all use cases, and [fallback solutions](#)
- **Lead understanding of technical scope for design-** cross comm between Signals, DA OE, and RO MAE ENG
- **Organized design timeline [estimations](#) across app engagement** for affected teams influencing launch and design timeline

Design Excellence

- **Lead E2E design flow** across all 5 campaign types {30+ use cases and 100+ campaign creation component variants}
- **Lead 3 [walkthrough](#)** of design solution with APS design team

SKAN Usability Improvements {Dec 2021 - March 2022} || [AIP](#) | [Figma](#) | [Product Brief](#) | [EQP gain summary](#)

We launched the **first SKAN error project (100% launch)**, decreasing SKAN L3 creation TCT (Time cost per task) by **3.74%** and increased SKAN L3 creation TCR (Task completion rate) by **0.13%**.

Product Impact

- Improved guidance on **5 errors (over 175,000+ counts)** with additional re-design to 3 selectors {BAU app, iOS 14+, and Optimization}
- We **successfully aligned** with MMT & Signals, AP Platforms, Creative & Guidance, and Dev Platform team (*refer to expanded version for full details)

Strategy

- Introduce [design framework](#) that not only focus on error usability improvements but also incorporates proactive [Biz Setup](#) (**App Ads AdEx team [roadmap](#) now includes resources for this framework in H1 2023)

Design Excellence

- **Error resolution and guidance (100% launched):** 6 cross-surface errors, 80+ component variants designed and collaborated with CD {also, Optimization and App selector re-designed for App Install campaigns}
- **Future Biz Setup Framework (H1 2023 resource allocated):** Reduced 5 surface, multi-page setup into 1 widget in Account Overview {40+ component variants + 3 tier logic chart with 2 entry points}

SKAN o Cooldown {July 2022 - Aug 2022} || [AIP](#) | [Figma](#) | [Product Brief](#) | [Dashboard for adoption and impacted revenue](#)

We now currently **beat competitors (ex: [Snap](#) and [Twitter](#)** with a 48+ hour cooldown). **Past 90 day revenue is 2.49M.**

Product Impact

- **Audited product changes across 3 major flows** (Events Manager SKAN configuration, App ads campaign creation, Ads reporting) successfully deprecating 10+ outdated guidance messages and updating the E2E flow of SKAN configuration for app campaigns

Design Excellence

- 30+ component variants on Ads Manager campaign creation, Reporting, and Events Manager SKAN configuration

A+AC vs A+AC A/B testing V1 {Dec 2021 - June 2022} || [AIP](#) | [Figma](#) | [A/B test rollout solution](#) | [Usability test results](#)

We are 100% launched **with 130 monthly active advertisers**. The team launched V2 with V1 data, my backlog, and ADP team partnership.

Product Impact

- Lead team as **product owner** - finalize design and hand-off prototype to UXR for usability testing, create AIP and lead product and design alignment phase, and negotiate with A/B team on [build responsibilities, ENG schedule, and launch protocol](#)
- **Unblocked** team to get to **100% launch from misalignment blockers during 10% launch** through [layout of design proposals](#)

Strategy

- **Lead full product strategy** on entry points, split testing variables, and entire testing flow
- Forged one of the [first A/B test team partnerships](#) for build roles, product constraints, and overlapping design issues

Design Excellence

- Created 2 E2E prototypes for UXR (**used for 10 participants**)
- My A/B test publishing [toast](#) was **scaled for *ALL* A/B test design flows**

App Ads Vision Framework {Nov 2022 - Dec 2022} | [Vision Framework Figma](#), [Resource Index](#), [H1 Journey Map](#), [Updated Journey Map](#)

The team created in-progress rough drafts of a revised journey map from H1 and a framework synthesizing current knowledge for identified opportunities. The team looks to socialize these design artifacts and hold a sprint with App Ads stakeholders in Q1.

Product Impact

- **Lead team direction** through the journey map I lead in H1 and context on past resources / POCs
- **Create draft vision framework alignment** with input from Signals BPS, App Ads UXR and PD

Strategy

- **Construct draft framework documenting identified and addressed advertiser issues** starting from understand work -> project formation & execution -> project impact -> next steps

Design Excellence:

- **Large-scale visualization on 6 phases of the app setup** depicting identified documentation, current and completed workstreams, near-term planning, and synthesized knowledge

App AEM V1 War Room {Jan 2022 - March 2022} || [S2S/ MMP expansion Figma](#) & [guidance logic](#)

The team **launched the S2S/ MMP expansion to 100%**. The other project was delayed as I **flagged risks of negative revenue performance**.

Product Impact

- Stopped potential backend logic that would have created **negative** revenue

Strategy

- Stopped the progression of the project after **experimentation data confirmed that my premonition was correct**: the delivery change on 1P opt-in users would actually create negative revenue impact

Design Excellence:

- Created **2 E2E design skeletons templates** for CDs to input their respective guidance

PEOPLE PILLAR ^{}(REFER TO EXPANDED VERSION FOR FULL DETAILS)**

IC RELATIONSHIPS ^{}(REFER TO EXPANDED VERSION FOR FULL DETAILS)**

Mentorship of Ziyi Yan (PD)- tracking project progress, answer career questions, and aid negotiation of design timeline for her first project

Onboarding Tiffany Hsia (CD)- onboard her into App AEM V2, providing context and

resources for all scoped use cases for app engagement

Onboarding Buddy of Josh Matson (PD)- aid in his transfer into A+AC domain from prior PD lead

SOCIAL EVENT LEADERSHIP/INVOLVEMENT **(REFER TO EXPANDED VERSION FOR FULL DETAILS)

H2 Design Day Planning STO | [Design Day Deck](#) | [Design Day Planning Agenda](#)

AP PD Summit Signal Loss Presentation | [Signal Loss presentation](#)

TEAM/PILLAR INVOLVEMENT **(REFER TO EXPANDED VERSION FOR FULL DETAILS)

AP PD Community: Developing Strategy | [Developing Strategy Agenda](#) | [Developing Strategy kick-off](#)

Involvement in Team Sprints | [A+AC Unification Design Sprint Figma](#) | [Conversions Design Sprint](#)

GROWTH AREA

- In H1 2023, I will focus on growing my leadership: furthering my design influence on more product-level decisions, long-term strategy, and current project trajectories. I will be able to hone these skills through my manager's guidance on positioning me in more opportunities as a PD lead on cross-functional projects and my upcoming App Ads AdEx duties to sharpen my product leadership skills in macro-alignment discussions, widen my domain knowledge, and identify opportunities the team can work on.

FUTURE EXPERIENCES

- I hope to continue working on projects that allow me to still sharpen my leadership skills but also further mature my skills as a product designer. My 2022 year was filled with numerous interesting projects that focused on the guidance of our backend technologies to our advertisers in a legal- and Meta-compliant manner. I hope to diversify my design skills through future experiences in product vision work, complex interaction behavior, and deep design framework construction.

2022 Product Design Self-Review (FULL VERSION)

PRODUCT IMPACT, STRATEGY, AND DESIGN EXCELLENCE

App AEM V2 {March 2022 - Present}

Relevant documentation: [AIP](#) | [Figma](#) | [Setup Messaging Figma](#) | [Product Brief](#) | [AEM Walkthrough for ENG](#) | [Tech overview deck](#) |

Context: The current solutions to reach opt-out users for iOS 14.5+ across all app

campaign types {IE SKAN, App AEM V1) face **poor adoption and poor performance**, consequently feeding into a [29% drop](#) in App Ads revenue in H2 2021. App AEM V2 serves as a **home-grown umbrella solution across App Install and App engagement campaigns** to provide improved performance, reporting, advertiser experience, and privacy.

Outcome: I lead the product strategy and design execution for integrating App AEM V2 across the app engagement campaign creation flows {Dynamic Ads, Advantage+ Shopping, Manual Sales, Engagement, Leads}- which constitutes [~7% of total ads Meta revenue](#). Our design team **produced all design flows by the projected timeline** with sign-offs from ENG and initial reviews from Ads product system (APS) design team. App engagement side of App AEM v2 plans to undergo PQE in late January and launch in late March.

How I drove...

- **Product Impact**

- **Finalized all design** across DA OE (Dynamics Ads) and RO MAE (Advantage+ Shopping, Sales, Leads, Engagement)
- **Designs undergone reviews** for Advertiser Product, Measurement, Core Ads, and Xiaoduan {Ex-MMT director}
- **Onboarded new CD** (Tiffany Hsia) onto App AEM V2 on every use case and lead heavy involvement in [messaging use cases for App AEM eligibility](#) guidance for app engagement
- **Lead xFN team alignment** with **sign-offs from DA OE tech lead and RO MAE tech lead** through multiple design walkthroughs/hand-off on all use cases
- **Lead cross-team alignment with 6 teams:** 3 MMT & Signals (multi-channel multi-event, Universal Link, Consolidation), 2 Core delivery (Post-click experiences, KPI expression), and 1 CXP (Commerce Manager)
 - **MCME:** design [new user flow](#) for AEM integration into MCME
 - **Universal Link:** lead [strategy](#) for guidance in campaign creation for Universal Link verification
 - **Consolidation:** deprecate their [selector design](#) for our new aligned design
 - **Post-click experiences:** integrate AEM to PCE's [new Destination card](#)
 - **KPI expression:** integrate AEM to new [Conversions card](#)
 - **Commerce Manager:** align with their guidance team to intake [AEM guidance](#)

- **Strategy**

- **Lead design solution** on App AEM V2 Eligibility for app engagement - finalizing app and app event level criteria, [fallback solutions](#), and necessary partnerships/integrations across surface teams
- **Lead understanding of technical scope for AEM design in campaign creation-** cross communication between Signals ENG, DA OE ENG, and RO MAE ENG
- **Organized design estimations across all of app engagement** for affected horizontal/vertical teams influencing launch timeline prior to design execution to

balance design timeline

- **Design Excellence**

- **Lead E2E design integration of App AEM V2** across all 5 campaign types
- **Lead 3 [walkthrough](#)** of design solution with APS design team
- **Lead design execution on 30+ use cases and 100+ campaign creation component variants** including guidance intake outside of campaign creation, in Commerce Manager and AM reporting table

SKAN Usability Improvements {Dec 2021 - March 2022}

Relevant documentation: [AIP](#) | [Figma](#) | [Product Brief](#) | [EQP gain summary](#)

Context: App Advertisers currently need to use SKAdNetwork (SKAN) API to measure app installs and in-app events from opt-out audiences. **Inbounds suggest that errors blocking SKAN campaign creation—as well as the lack of guidance about how to resolve those errors—are significant pain points for advertisers.** Advertisers who encounter blocking errors during SKAN campaign creation churn more often than others.

Outcome: Our team launched the **first SKAN error project (100% launch)** on 10/04 decreasing SKAN L3 creation TCT (Time cost per task) by 3.74% and increased SKAN L3 creation TCR(Task completion rate) by 0.13%.

How I drove...

- **Product Impact**

- Improved guidance on **5 errors (over [175,000+](#) counts)** with re-design to 3 selectors {BAU app, iOS 14+, and Optimization}
- We **aligned** with Measurements & Signals, Advertiser Product Platforms, Creative & Guidance, and Dev Platform team on design patterns that reached into their domain
 - Dev Platforms: align on new [preventative guidance](#) on iOS platform card for app setup
 - MMT & Signals: align deprecation of **blocking [Signals interaction behavior](#)**
 - AP Platforms and C&G: align on integration of new error interaction framework

- **Strategy**

- Introduce [design framework](#) that not only focus on error usability improvements but also incorporates proactive [Biz Setup](#)
 - ****App Ads AdEx team [roadmap](#) now includes resources for this framework in H1 2023**
 - Current setup requires advertisers to traverse to potentially 5 separate surfaces to be able to create app campaigns
 - **Biz Setup:** funnel advertisers into a single-surface, consolidated setup process

- **Design Excellence**

- **Error resolution and guidance (100% launched)**
 - 6 cross-surface errors and 80+ component variants designed and collaborated with CD
 - Optimization and App selector re-design for App Install campaigns
- **Future Biz Setup Framework (H1 2023 resource allocated)**
 - Reducing 5 surface, multi-page setup into one widget in Account Overview
 - 85% completed with Permissioning flow (3 surface setup) simplified into 1-2 selection request
 - 40+ component variants + 3 tier logic chart with 2 entry points

SKAN o Cooldown {July 2022 - Aug 2022}

Relevant documentation: [AIP](#) | [Figma](#) | [Product Brief](#) | [Dashboard for adoption and impacted revenue tracking](#)

Context: When an advertiser made a change to an app's SKAN event configuration, all active iOS 14+ campaigns for that app were paused for 24 hours. The cooldown was implemented to avoid potential misattribution because the SKAN API sends conversion events on a random delay of 24 to 72 hours. **Advertisers expressed a need to remove the cooldown period** to enable faster experimentation and changes to their campaign strategy.

Outcome: Our team launched the project (100% launch), **edging out our competitors like [Snap](#) and [Twitter](#)** who all have a minimum of a 48 hour cooldown. Cumulative revenue generated from the **[past 90 days is 2.49M](#)**.

How I drove...

- **Product Impact**
 - **Audited product changes across 3 major flows** (Events Manager SKAN configuration, App ads campaign creation, Ads reporting) successfully deprecating 10+ outdated guidance messages and updating the E2E flow of SKAN configuration for app campaigns
- **Design Excellence**
 - Guidance on Ads Manager campaign creation & reporting and Events Manager SKAN configuration
 - 30+ component variants

A+AC vs A+AC A/B testing V1 {Dec 2021 - June 2022}

Relevant documentation: [AIP](#) | [Figma](#) | [A/B test rollout solution](#) | [Usability test results](#)

Context: A+AC advertisers did not have a viable testing protocol to improve their A+AC performance due to **A+AC's unique cardinality rules**. Advertisers were forced to request approval to utilize a manual, multi-step split testing process that had unclear or no guidance that left advertisers to churn or face high user friction from this feature.

Outcome: The team launched the **project (100% launch) on 08/26, with 130 monthly active advertisers currently**. The team also launched a V2 with the usability testing data on V1, my backlog on future enhancements, and partnership with the London ADP team.

How did I drive...

- **Product Impact**
 - Lead team as **product owner** - finalize design and hand-off to UXR for usability testing, create AIP and lead product and design alignment phase, and negotiate with A/B team on [build responsibilities, ENG schedule, and launch protocol](#)
 - **Unblocked** team to get to 100% launch from misalignment blockers during 10% launch through [layout of design proposals](#)
- **Strategy**
 - **Lead team strategy** on entry points, split testing variables, and entire testing flow
 - Forged [one of the first surface partnership](#) with horizontal A/B test team including build responsibilities, product constraints, and overlapping design issues
 - Managed early negotiation of V2 with the proper hand-off to new PD
- **Design Excellence:**
 - Created 2 E2E prototypes for UXR (used for 10 participants)
 - My A/B test publishing toast was **scaled for ALL A/B test use flow**

App Ads Vision Framework {Nov 2022 - Dec 2022}

Relevant documentation: [Vision Framework Figma](#), [Resource Index](#), [H1 Journey Map](#), [Updated Journey Map](#)

Context: The App Ads AdEx team aims to produce a longer-term plan for App Ads usability with the adjacency to App Signal Loss and A+AC unification. The team is utilizing all past resources, current projects, and short-term future projects as well as heuristic analysis to identify new opportunities we can work on.

Outcome: The working team created in-progress rough drafts of a revised journey map from H1 and a framework synthesizing current knowledge for identified opportunities. The team looks to socialize these design artifacts and hold a sprint with App Ads stakeholders in Q1.

How did I drive...

- **Product Impact**
 - **Lead team direction** through the usage of the journey map I lead in H1 2022, guidance on past resources and POCs for domain knowledge, and my historical knowledge of app ads setup
 - **Create vision framework** with input from Signals BPS, App Ads UXR and PD
- **Strategy**
 - **Construct framework documenting identified and addressed advertiser issues**

starting from understand work -> project formation & execution -> project impact -> next steps

- **Design Excellence:**
 - **Large-scale visualization on 6 phases of the app setup** depicting identified documentation, current and completed workstreams, near-term planning, and synthesized knowledge

App AEM V1 Upgrades / War Room Effort {Jan 2022 - March 2022}

Relevant documentation: [S2S & MMP expansion Figma](#) | [S2S and MMP expansion guidance logic](#) | [Reenabling app destinations for iOS 14.5+ opt-in users Figma](#)

Context: App AEM V1 faces low adoption rate and poor performance. The two projects involved {S2S and MMP Expansion, Reenabling app destinations for iOS 14.5+ opt-in users} were initiated to further recover the engagement ads revenue lost from policy changes from iOS 14.5+.

S2S/MMP expansion: Expand App AEM V1 to support advertisers that use MMP or S2S as their event sources

Reenabling app destinations for iOS 14.5+ opt-in users: change backend logic to send 1P opt-in users to app instead of web for non-eligible App AEM V1 advertisers

Outcome: The team launched the S2S and MMP expansion project (100% launch) on 09/15. The other project was delayed as I flagged that the re-introduced backend strategy change has risks of actually creating negative revenue performance. The team launched the project (100% launch) on 07/07 after backend pivots.

How did I drive...

- **Product Impact**
 - Stopped potential backend logic that would have created negative revenue
- **Strategy**
 - Stopped the progression of the project after experimentation data confirmed that my premonition was correct: the delivery change on 1P opt-in users would actually create negative revenue impact
- **Design Excellence:**
 - Created 2 E2E design skeletons templates for CDs to input their respective guidance

PEOPLE

IC RELATIONSHIPS

Mentorship of Ziyi Yan (PD)

My involvement: Ziyi and I have a weekly meeting instance where we track her project progress, answer career questions, and discuss design skills. I also aided the

negotiation of the design timeline for her first project: A+AC Split testing V2.

Onboarding Tiffany Hsia (CD)

My involvement: I onboarded Tiffany onto the App Ads ecosystem and into the direct scope of her work in App AEM V2. I have provided resources and full context on all scoped use cases for app engagement, downstream information from leadership, and design guidance on necessary deliverables for App AEM.

Onboarding Buddy of Josh Matson (PD)

My involvement: I aided Josh in the transfer of the A+AC domain from prior PD to Josh Matson. Josh and I had a weekly meeting instance discussing onboarding resources and design tools.

SOCIAL EVENT LEADERSHIP/INVOLVEMENT

H2 Design Day

Relevant documentation: [Design Day Deck](#) | [Design Day Planning Agenda](#)

My involvement: I lead the planning of Design Day for all AA design xFN team. Through leading a 5-man planning committee and communication with AA leadership, I was able to successfully plan a 5-event hybrid remote/onsite design day. I delegated tasks for event setup to the planning team, designed the presentation slides, and planned the shareouts from Creative and AXP & Flex team.

AP PD Summit

Relevant documentation: [Signal Loss presentation](#)

My involvement: For the Ads Automation design team deep dive, I presented a high-level overview on the H1 projects that the App Ads team was currently working on.

TEAM/PILLAR INVOLVEMENT

AP PD Community: Developing Strategy

Relevant documentation: [Developing Strategy Agenda](#) | [Developing Strategy kick-off](#)

My involvement: I participated in a weekly workshop led by Elise Fu (Senior PD) discussing PD strategy: opportunities for strategic involvement, influence on product strategy, methods to improve strategy skills, and resources to build strategy docs.

Involvement in Team Sprints

Relevant documentation: [A+AC Unification Design Sprint Figma](#) | [Conversions Design Sprint](#)

My involvement: I participated in A+AC and BAU unification sprint- providing insight from a Signal Loss design perspective on Josh Matson (PD)'s future plans and provided rough sketches of possible [design opportunities](#). I also participated in Signal team's Conversions design sprint for streamlining signal setup- providing a [brief shareout](#) on App AEM V2's future effects on Signals Setup.

GROWTH AREA

- In H1 2023, I will focus on growing my leadership: furthering my design influence on more product-level decisions, long-term strategy, and current project trajectories. I will be able to hone these skills through my manager's guidance on positioning me in more opportunities as a PD lead on cross-functional projects and my upcoming App Ads AdEx duties to sharpen my product leadership skills in macro-alignment discussions, widen my domain knowledge, and identify opportunities the team can work on.

FUTURE EXPERIENCES

- I hope to continue working on projects that allow me to still sharpen my leadership skills but also further mature my skills as a product designer. My 2022 year was filled with numerous interesting projects that focused on the guidance of our backend technologies to our advertisers in a legal- and Meta-compliant manner. I hope to diversify my design skills through future experiences in product vision work, complex interaction behavior, and deep design framework construction.

Shane Yun • Product Designer

What impact have you achieved so far?

Include progress against business goals, contributions to building internal community, and impact achieved. For Engineers, the Project Impact axis may be described here.

****[EXPANDED PSC documentation linked here](#)**

App AEM V2

- Lead design team across Mobile App Installs (MAI) for Ads Manager (AM) campaign creation ([Figma](#))
 - MAI: 90% launch for SDK advertisers (06/30)

- MAI advertisers AEM-eligible saw a [9.5% increase](#) in incremental conversions at the similar CPI and CPA
- Lead design team across Mobile App Re-engagement (MAE) for AM campaign creation ([Figma](#))
 - MAE: [100% launch](#) across Dynamic Ads, Sales, Leads, and Engagement campaigns (05/11)
 - [Stats Dashboard](#)
 - 50.52% of all MAE revenue is from App AEM V2, surpassing H1 goal of 35%
 - 2 million / day in daily revenue
 - 620+ eligible eligible ad accounts
- Lead facilitation & alignment on multiple design updates across 6+ teams and 4 surfaces
 - Ex 1: UniversalLink Integration into MAE campaigns ([Figma](#), [Brief](#))
 - Ex 2: AEM scope expansion into 3CO ([Figma](#), [Brief](#))
 - Ex 3: Ads Manager Reporting - Mid-Flight Campaign Recommendations ([Figma](#))
- Lead design roadmap and timeline for post-GA H2 improvements ([Doc](#)) with full alignment by xFN product team

App Setup Tool

- MVP: [100% launch \(06/27\)](#) ([Figma](#))
 - [Stats Dashboard](#)
 - app ads revenue: +4.5%
 - 761 Meta app has been unblocked to run app ads in the last 21 days
- Onboard full design team to create MVP that stems from my [H1 2022 early designs](#)
- Lead strategy + design flow for long-term vision, specifically phase 2 work - simplification of App Ads business, app, and user permissions strategy model ([Figma](#))
- Consult on partnership with FLEX team, design review for AIP, and MVP scope in alignment with xFN management ([Brief](#))

What are the skills/behaviors that led to the outcomes/impact achieved, including work on efficiency? Identify 1-2 [Meta Skills](#) or [Levels & Expectations](#). For Engineers, the Engineering Excellence, Direction, and People axis may be described here.

App AEM V2

Design Excellence

- Align E2E AdEx flow for [MAI](#) and [MAE](#) with Signals and Reporting design team
- Maintain consolidated design files for [MAI](#) and [MAE](#)- housing all design components, interaction details, and technical context

Strategy

- Identify key misalignments in MAI guidance leading to simplification of [E2E strategy](#) + [logic visualization](#)
- Identify and audit key points for MAI [UXR discussion guide](#)
- Lead alignment on [MAE guidance strategy](#) with Signals Growth xFN
- Lead current prioritization of potential [H2 Post-GA design tasks](#)

App Setup Tool

Design Excellence

- Design [early-stage concept flow](#) simplifying [interactions from 3+ surfaces](#) building upon [FLEX Biz Setups](#)

Strategy

- Re-design an [E2E simplified business, app, and user permissions strategy](#)
- Create [Post-MVP timeline](#) for potential future Pre-Beta + Beta Launch Stage

People

Highlight your impact relative to goals and expectations. Your mid-year self-review will be included in the year-end review process. Because of this, focus on impact, progress and results achieved since then. Include contributions to efficiency initiatives and [building internal community](#). If axes are applicable for your role, you can include them here.

Product Impact

Lead product design across 7 A+SC growth projects

- Drive design across 6 completed AIPs + 1 design complete project prior to code freeze and 2023 expedited AIP timelines
- Forge DES partnerships with BAU Placements, Targeting, Bidding and Signal growth teams
- **Impact:**
 - **Topline:**
 - Reach 1-day 32.8% adoption on a P20 26.9% goal through the 6 launched growth projects
 - **7 Projects**
 1. Value optimization + minROAS goal addition (GA)
 - a. reach ~\$700k daily revenue with a WoW growth rate of 30%
 2. Placements exclusion (Both GA)
 - a. V1 (Audience Network)
 - b. V2 (Marketplace + RHC expansion)
 - reach 3.5% of A+SC's revenue and .13% new spender iRev adoption
 1. App AEM V2 for A+SC (GA)
 - a. AEM re-engagement run rate reaches record high \$6M daily revenue
 - b. **Drove feature scope, timeline, and initial designs*
 2. Non-purchase event expansion (10% rollout)
 - a. every 10% experiment metric as positive (Dashboard)
 3. Cost per result goal addition (90% rollout)
 - a. reach 2.5M daily revenue and 6.3% adoption of ASC's total revenue
 4. Advantage+ Audience alignment
 - a. design milestone complete

Drive product design across all A+SC workstreams in Q4 (excluding Sales Unification)

Enhanced Audience Reporting

- Complete design milestones of creating E2E test designs and 2 rounds of CSM interviews
- **Impact:**
 - Leverage design to form BAU Sales partnership to implement A+SC's reporting experience in BAU campaign creation and ad account setup in H1 2024
- Align A+SC's H1 2024 Reporting and Budget design experience with Sales Unification, Small Rocks Usability, and Targeting to further increase BAU and A+SC parity for

Sales unification

Small Rocks Usability Task Force

- Lead [identification and design sizing](#) of 27 A+SC usability issues across campaign creation and ad account setup
 - **Impact:**
 - 24 usability issues resolved from team with 21 items rolled out

Design Excellence

A+SC growth projects

- Craft **7 E2E design experiences across 3+ surfaces** compliant to AIP and align with 2024 Sales Unification changes
- Construct [A+SC component den](#) to house 70+ flexible design components across all AIPs

A+SC Enhanced Audience Reporting

- Craft 4 E2E test workflows across AM reporting table, AM campaign creation, and ad account setup
 - Design [40+ component iterations](#) across 5 surfaces for 2024 AIP review and 2023 usability testing
- Conduct 2 rounds of CSM interviews (7+ participants each) across 4 geographic locations

Strategy

A+SC growth projects

- Forge partnership with [Placements design team](#) to utilize A+SC's L4 placements exclusion in BAU Sales flow
 - **Impact:**
 - Lead to further placements design parity across BAU Sales and A+SC in H1 2024 providing an easier transition into Unified Sales state
- Identify scope/timeline inconsistencies across projects to reach [yellow zone exemption timelines](#) and A+SC adoption goal ([Ex: Non-purchase event design scope alignment](#))

A+SC Enhanced Audience Reporting

- Co-drive [Round 1](#) interview process (CSM interviews, discussion guide, and synthesis) to provide early design direction and feature validation

- Drive [Round 2](#) interview process to validate test designs and provide design recommendations for final E2E flow
 - **Impact:**
 - Leverage interview results to improve interaction design and advertiser comprehension over 2+ cycles of iteration and propose an improved approach aligning with A+SC budget cap deprecation

A+SC full funnel vision

- Co-drive early stage shopping advertiser full funnel design explorations
 - [Creative end-state](#)
 - [Campaign creation end-state](#)
 - **Impact:**
 - Leverage vision to stage an [H1 partnership with CDP full funnel workstream](#) for research specific to shopping advertisers
 - Craft shopping advertiser focused [design analysis on Creative audience pairing](#) to align with A+SC stakeholders on holding off pairing investment with lack of predicted gains and advertiser value

People

- PD mentorship - Ziyi Yan
- [Vertical Design Summit \(Design Olympics\) \(WP post\)](#)
- [Figma Component Design Jam](#)
 - Instruct eComm PDs on leveraging Figma components to reduce maintenance overhead and improve iteration process
 - Lead to Sales unification leveraging components for Progressive Disclosure
- [H2 2023 PD Swag](#)

What impact have you achieved so far? Include impact achieved, progress against business goals, contributions to efficiency initiatives, and [building internal community](#).

Product Impact

DA Entry Point Consolidation

- Lead DA Sales re-design to unify fragmented entry point experience
- **Results:** Complete [E2E design vision](#) for a simplified, single-entry point Sales DA flow to test in H2 2024 that includes:
 - Standalone L3 catalog card
 - Simplified L2 Audience card deprecating major legacy features
 - Improved L2 Conversions card offering 1+ event source selection
 - L1 flexible creative sourcing through SA and DA
- The consolidation strategy will **impact [12k advertisers that split \\$850M yearly in ad spend](#)** over 1+ entry point

Automation Unification

- **DA**
 - Lead full design alignment and execution of E2E DA experience for Unified Sales and App
 - **Result:**
 - Complete [leadership sign-off of DA treatment](#) for H1 A+SC and Unified Sales
 - Mitigated performance and experience risk of current A+SC advertisers ([19% of DA revenue](#))
 - Complete design milestones across Unified Sales and App and drive partnership

with AU design v-team including Targeting, BX, and A+SC

- [A12614](#): DA for Unified App ([GA](#))
- [A12790](#): DA for Unified Sales ([Complete - in QE](#))

- **Pillar 1 feature parity**

- Drive design solutions for L2 feature parity task items for Unified App
- **Result:** Complete design milestone and [launch L2 feature parity items with all NEUTRAL topline metrics \(liquidity, revenue, and TCR\)](#)
 - [A12148](#)
 - Item 1: DCO deprecation across Unified Sales and App
 - Item 2: Performance goal parity for Unified App

Enhanced Audience Reporting

- Lead design experience across 5 cross-team surfaces: 3 campaign creation flows (Manual, A+SC, and Unified Sales), L4 ad account setup, and AM reporting for new audience segment feature
- **Result:** Complete 2 design milestones and launch design solutions across **3** Sales campaign experiences
 - [40k accounts \(22% of ASC daily revenue\) have adopted](#)
 - [11.5% of Sales daily revenue use this feature](#)
- [A12811](#): Unified Sales + BAU Sales expansion ([50% rollout](#))
- [A12324](#): A+SC ([GA](#))

Design Excellence

DA Entry Point Consolidation

- Lead design craft for E2E single entry point Sales DA experience
 - L3 Catalog Card
 - Align with AU teams (BX, E2E Content) on a new standalone Catalog card to increase DA exposure
 - L2 Targeting
 - [Performed E2E audits](#) across 3 different targeting experiences in Sales to propose simplification of DA's L3 entry point targeting experience from a 2 flow, 3 card experience to 1 flow, 1 card experience
 - [Aligned deprecation of 2 redundant in-line features](#) (Prosp. Vs Retarg. & Product Audiences) in order to simplify targeting inputs and pivot closer to full parity between DA entry points
- L2 Conversions + L1 Destinations
 - [Performed E2E audit across 4 major features](#) (conversion locations, performance goals, event sources, and Advantage+ destinations) between Sales DA entry points

to propose improved Conversion card that has full feature parity

Automation Unification

- Build 20+ component, [2 E2E prototypes](#) for Unified Sales DA experience for QE + [leadership review](#)

Enhanced Audience Reporting

- Drive [design solution](#) across 5 surfaces (ad account setup, 3 campaign creation flows, reporting) housing 50+ components for 3 design reviews
- Align proper transition of all L4 components from the Ad Account Setup to new Advertising Settings

Strategy

Automation Unification

- Build [early POV of design and liquidity risk of current A+SC](#) user's exposure to additional DA entry point in Unified Sales
 - Collaborate with AU xFN through war room sessions to complete [alignment with leadership](#) on DA treatment in A+SC and Unified Sales

DA Entry Point Consolidation

- Lead and socialize [2025 design vision for an E2E streamlined Sales DA experience](#)
 - Share out design vision and drive long-term partnership with C&G, Catalog, Targeting, and Automation unification team for early feedback
 - Lead [full E2E alignment with Targeting team](#) on proposed Audience design for Unified sales DA
- [Lead product team to identify full design scope to complete](#) DA entry point feature parity and eventual L1 entry point deprecation

Product Declaration

- Collaborate with PCA design team to identify design scope for initial strategy by:
 - [Building DA wireframes](#) to illustrate design complexity of declaring product for SA advertisers
 - [Auditing AutoCAT's closed beta design](#) to identify potential changes needed for PCA's end-state
 - [Perform Google audit of product set selection](#) in Standard Shopping and pMax campaigns to identify complex differences between their current product offering and our proposed strategy

Enhanced Audience Reporting

- [Co-drive design alignment with BX and Targeting team](#) to build long-term L4 entry point strategy
 - Build POV to retain current entry point (L4 Ad account setup) by identifying massive design complexity and H1 timeline risk of migrating to Targeting's surface

(Audience Manager)

People

- **PD mentorship - Astro Tran**
 - Provide bi-weekly mentorship to new CRG PD for IC development, manager relationship, and career growth
- **Monthly Verticals Shareout**
 - Conduct survey on increasing participation and improve session formats
 - Execute on learnings by improving pre-session engagement, actively recruiting speakers, and pivot to lightning talk format
- **Design Jam**
 - Host monthly design jam sessions including Google Ads dogfooding, xFN shareouts, and design feedback
- **[April eComm Summit Slide Deck](#)**
 - Co-design and format 20-section slide deck
- **PD Swag**
 - Co-drive design of CRG and eComm PD team jackets

Share 1-3 strengths (work you most enjoyed and excelled at). Use the Meta Skills or [expectations](#).

PCA Unification: Workstream 1

L2 TARGETING FEATURE PARITY

- **Impact:** Launch complex, 3-surface Targeting re-design across BAU Sales/Unified Sales for A+CA (L3 ON flow) to 50% launch increasing [audience liquidity by 1.6%](#)
- Lead design partnership/consultation with 2 teams ([Collab Ads](#), [Market Messaging ads](#)) to align proper integration of their features into new PCA Targeting experience
- Lead [design audit of missing catalog custom audience features](#) for key L3 A+CA flow to flag UX changes to de-risk future Targeting rollout ([also flagged by UPB test](#))

L2 CONVERSIONS FEATURE PARITY

- **Impact:** Launch conversion location selection to A+CA L3 ON flow to 100% for catalogs with single data sources (Phase 1)
- **Impact:** [Complete E2E design milestone](#) to shift H2'24 progressive disclosure conversions design to [new Destinations automation](#) framework
- Lead design partnership/consultation with 5+ teams ([Omni-channel](#), [Calls](#), [Marketing Messages](#), [EVC](#), [Destinations](#), etc) to scale new conversion channel options and E2E integration for partner team designs
- [Lead product behavior change and designs](#) to de-risk migration of current 3CO ad sets integrate to new designs
- Audit [current data source selection experience disparity](#) to align with product team on H2 research with sales round table to identify right UX for unified PCA flow

PRODUCT SET GOVERNANCE

- **Impact:** Ensure **all** H1'25 product set integration features from non-PCA teams scale to PCA long-term vision while unblocking their launch timelines
- Lead governance + partnership across 3+ non-PCA teams (Catalog, Shops, and CPG) to align design experience for [Product set expansion](#), [Product set optimization](#), [Product data version](#), and [Product suggestions](#)

WS1 ALPHA

- **Impact:** Complete [E2E, 30+ wifeframe initial designs](#) for Q3 Alpha to ensure team meets timelines despite rolling product decisions
- Design full E2E flow highlighting:
 - Unified L3 catalog selection defaulted ON with an exit point for alpha experience
 - Unified L1 product set selection
- Drive design alignment with key xFN for alpha exit point location for bifurcated experience

Design Excellence

Usability & Governance

FLOW 1037: PRE-LEADS DOGFOODING REVIEW

- Lead 8 designers to audit [64 issues within a complex, L3-L1 PCA strategic flow \(40% of A+CA revenue\)](#) that touches Catalog, Conversions, Targeting, and Creatives
- Lead PCA design team to fix all [21 assigned MR and SR usability tasks](#) assigned within the SLA and work with Usability leads to triage and govern [43 other tasks](#)
 - Execute directly on 2 MRs and 2 SRs across Flow 1037 and 44
- Drive Flow 1037 review with [CAG-level leads in CoE friction review](#)
 - Organize entire brief to include full dogfooding instructions, flow context, and tracker of all 64 issues
 - Drive multiple reviews at the CAG friction leads, eComm leads, and CAG level
 - Build [flow 1037 tracker for easier communication amongst xFN on task progress](#)

FLOW 44

- Complete 1 MR within SLA, [contributing to H1'25 flow 44 graduation and the flow landing 21 MRs \(highest overall in CAG\)](#)

UXR concept test - Unified PCA flow for product selection

- Design and assemble [2 E2E PCA unified concept flow \(1. catalog default ON + L2 product set selection 2. catalog default ON + L1 product set selection\)](#) for probing questions + co-create research study for 10 in-depth interviews to inform recommended product selection flow
- Review [hypotheses and research questions](#) and assist on pre-work for interviews (pre-study interviewer's ad accounts for campaign and product set structure)

Strategy

PCA track 2: Product experiences

PRODUCT LIQUIDITY STRATEGY

- Drive product team to [map key advertiser problems for product selection to solution levers](#) for early steer review with eComm leads
 - Push design alignment on migration [of product set expansion feature to new product suggestions framework](#)
- Lead design strategy and product selection north star to determine which [solutions apply to AM and/or CM](#) to influence [E2E concept prototypes](#) of product set creation and selection in AM and CM
- Lead design POV on [3+ themes/projects](#) for [H2'25 product experiences roadmap](#) on PD bandwidth, AdEx changes, and current frictions

PCA INCUBATION

- Key contributor to first [strategy doc and roadmap](#) by flagging overlapping strategies and workstreams to core team in partnership with Donald H (EM)
 - Resulted in early pivots for the 1st party data projects section to ensure clear swim lanes and spark technical partnerships for shared objectives

People

AIP

- Review 11 [AIP projects \(2 panel + 12 audit reviews\)](#) for 100% SLA adherence rate
- Review and flag 3 additional AIP projects as needing additional reviewers or mis-categorized on the portal

ONBOARDING | SYDNEY HARRIS (CD), IRIS OZGUR (PDM), ALEX THOMPSON (PD)

- Onboard Sydney on PCA through multiple-weekly calls providing technical context, product behavior, and xFN communication skills
- Onboard Iris and Alex on PCA feature parity efforts, product set research/discussions, and overall PCA structure

MENTORSHIP | PAUL LEE (PD)

- Mentor Paul on vocalizing his design POV in strategy and execution to ensure design needs, UX pain points, and advertiser problems are recognized in his workstreams

Q2'25 - eCOMM ALL HANDS

- Design eComm All Hands deck and communicate with leads to govern slide content
- Plan eComm design team dinner

What are 1-3 strengths demonstrated (work you most enjoyed and excelled at)?

What impact have you achieved in 2025? Include impact achieved, progress against business goals, and [significant contributions to how we work at Meta](#), which includes AI-driven impact, smart risk-taking and effective teamwork.

Product Impact

WhatsApp Monetization (WAMO)

GA

- **100% launch to Traffic and Engagement campaigns (3.6M+ ad impressions, 170k+ clicks, and [met launch goals](#))**
- Resolved [critical, last-minute BX blocker \(NUX tour component\)](#) preserving GA timelines. pivoted to geoGuidance component, led BizComm leads alignment, and updated all GA designs.

Post-GA

- **100% launch ([28.8% eligibility rate surpassing 27.6% target](#))**
 - Sales and Lead campaign expansion
 - Creative enhancements (90-second videos and CTAs)
- **Design complete for Awareness and AU Engagement campaigns**
- Led design execution of [Unknown age \(UA\) feature, new WA placement](#), and [creative enhancements](#) for Sales, Engagement, and Awareness

Non-ClicktoWhatsApp expansion

- **Completed WA identity selection [design milestone](#) unlocking WAMO's first non-CTWA experience (Website location)**
- Led design execution across [all L1 identity use cases](#), drive Marketing Messages (MM) alignment, and co-led [Identity strategy](#)

Search Ads

- **Designed FoA <> CAG aligned Search experience for 2027 alpha launch**
- Completed [3-phase research plan on E2E search experience](#)
- Led execution of [10+ concept flows](#), partnered with [4+ teams](#), and aligned alpha with [CAG/eComm design leads](#)

PCA-U

Targeting

- **50% launch to [Phase 1 \(1.6% increase in audience liquidity\)](#)**
- Led Phase 1 designs and partnerships with [Collab Ads](#), [MM](#), and Targeting for new A+CA Targeting integrations

Conversions

- **100% launch to [new AU Destinations design](#) unifying A+CA/SA Conversions experience**
- Led design execution integrating [Destinations design](#) and aligned 5+ A+CA integrations ([Omni-channel](#), [Calls](#), [MM](#), [EVC](#), [Destinations](#))
 - Unblocked Omni-channel launch ([\\$150M+ ARR, ~12% Omni revenue](#))

Alpha

- **Designed initial PCA alpha flow (L3 Catalog ON + L2+L1 p-set selection)**
- Led design execution and xFN alignment of [initial 30+ wireframe flow](#)

Usability

- **[Flow 44 graduation and 21 MR completion \(highest in CAG\)](#)**
- Executed 2 MRs + 2 SRs across Flow 1037 and 44

Design Excellence

WAMO

GA

- Accelerated QA team brand new to Ads Manager due to project confidentiality via [co-authoring 250+ page, 30+ use case dogfooding guide](#)

Post-GA

- Delivered 300+ AIP completed/ready wireframes across 3 projects, including scaling [E2E WA component library](#)
 - [Automation leads sign-off](#) on UA for AU Sales and Engagement campaigns
- Co-led Post-GA dogfooding, audited 50+ E2E use cases on [test accounts](#), and tracked [80+ tasks with ENG team](#)

Search Ads

- Propose new [“Placement-specific tools” section \(e-Comm leads-aligned\)](#), streamlining Placements architecture between placement controls and new tools
- Design new [PGD text input pattern \(Geo-aligned\)](#) supporting 50 text inputs
- Explore [7+ E2E flows](#) to identify best search tool entry points within/beyond AM, resulting in new Search brand safety tool in BSS center

PCA

Usability Flow 1037: CAG review

- Lead 8+ designers to [audit 60+ issue](#), [fix 21 tasks](#), and [triage 43 tasks](#) for [critical PCA flow \(40% of A+CA revenue\)](#)
- Led CAG-level [CoE friction review](#) with multiple eComm/CAG friction leads pre-walkthroughs

PCA-U

- [Audited PCA Targeting](#) flagging missing catalog custom audience features
- Audited [current PCA data source selection disparity](#) initiating H2'25 sales roundtable inbound

AIP

- Reviewed 19 [AIP projects \(5 panel + 4 audits\)](#)

AI heuristic evaluator

- Labelled 75+ desktop wireframes to train [Design Agent for Geo 2.0 <> XMDT team](#)

Strategy

Search Ads

- Led design for 3-phased UXR strategy, driving [weekly xFN syncs](#) and [Design PRD \(product research questions, competitive audit, design rationale, etc\)](#)
- Drove [eComm-/CAG-leads](#) and FoA- ([1](#), [2](#)) reviews to secure alpha experience sign-off
- Led Placements and BSS partnership, aligning search tool entry points
 - [New “Placements-specific tools” section](#) (Search themes) partnering into Placements [2026 strategy](#)
 - New [L4 Brand safety control \(Negative keywords\)](#)

WAMO

- Co-authored [WA identity selection/defaulting strategy](#), leading MM alignment on 6+ use cases

PCA

P-set strategy

- Lead alignment of 3+ teams' p-set integrations ([PSE](#), [PSO](#), [P-data version](#), [P-suggestions](#)) with PCA-U's vision/launch timelines
- Key research contributor designing [2 E2E PCA-U concepts](#) for 10-interview UXR, reviewing [hypotheses/research questions](#) and assisting on [interview pre-work](#)
-

Support [PCA CoE Review](#) by aiding in design narrative and UI flows

Product liquidity strategy

- Led product team to map key advertiser problems to solution levers for eComm leads' early steer review
- Led design strategy/product selection north star to determine applicable [solutions for AM and CM](#) driving [E2E prototype](#)

PCA Incubation

- Key contributor to [first Incubation/ 1PD strategy & roadmap](#)
 - Partnered closely with EM to bridge overlaps with other PCA workstreams, defining clear ownership and partnership models

AI Sprints

- **Project Leapfrog:** Contributed to 3-day sprint. producing an [AI-powered GBG ad vision presented to JJ](#)
- **Meta Search AI:** Brainstormed HMWs for monetization features into [2026 Search AI vision](#)

People

WhatsApp Anchor week

- [Guest speaker for CTWA Adoption vision sprint](#) on WAMO status and 2026 roadmap

PCA Onboarding

- Onboarded Iris, Alex, and Sydney through multi-weekly calls on PCA feature parity efforts, product set research/discussions, and overall PCA structure

PD Mentorship

- Mentored Paul Lee on vocalizing design POV in strategy to ensure UX pain points and advertiser problems are recognized
- Mentored 2 interns (Jen Z, Gily Y) on optimizing mid-point feedback, framing final project, and career inquiries

H1 eComm all hands

- Designed [eComm All Hands deck](#) and coordinate with eComm leads on content
- Planned eComm design team dinner

Intern Final Self Review

Shane Yun • Product Designer

Submitted 2020-08-06

Please describe the projects that you worked on this term. How close was it to your original project plan? What was delivered? Was it sufficiently challenging and interesting? Were you proud of the work you produced?

I worked on three project this term: Custom Audience Dropdown Geodesic Modernization, Targeting Category Manager Re-Design, and 6 Fixathon tasks.

- The Custom Audience dropdown project was to adapt the current dropdown design to fit geodesic standards and refine the interaction patterns to better match the user patterns. The Targeting Category Manager re-design project was to define which features would exist within the tool, where TCM would fit within the BCT creation and maintenance flow, and update the visual and interaction design to match the other BCT tool in development. My final project, the Targeting Fixathon, was a side project to update minor design inconsistencies found within the ads manager.

The project plan was extremely close to what my manager and I aligned with early on from the internship.

1. **The first two weeks was spent on the core project allowing me to become familiar with my team's workflow, internal tools, and ABP's visual design system.**
- I acquired knowledge on the targeting functionalities within ads manager as well as familiar myself with the geodesic design system. By the end, I was able to deliver a functioning prototype on my final design that was aligned by my project team.

2. I spent the next 8 weeks focusing on my core project: TCM Re-design. My scope was to determine which features would live within the TCM and then re-design the landing page as well as 1 tabbed tool.

- I spent the first two weeks gaining alignment from the teams on their current insight into the tool and creating documentation for the tool which did not exist prior. From the context that I was able to build, I created an all around design brief that laid out my expectations for the project / where the TCM will exist within the BCT workflow and multiple reference documents that now serve as the signal point for TCM work. At this point, I had proposed to the team that the TCM should depart from the request flow through the work I did figuring out current issues as well as which features would be deprecated.
- Setting the guidelines for the project, my next two weeks were spent setting the interaction patterns for the tool. With the departure from the request flow, I also proposed the landing tool to be the metadata tool rather than the Daily Stats tool which helped set the user flow for my scope of the project. During this time, I had multiple feedback/critique sessions that consisted on 1:1 with my manager, group feedback with my TCM project team, and group feedback with the Targeting team.
- Creating a rough user flow of the different options that users would have in the landing tool, I spent the next two weeks interviewing BCT requestors. I created an interview script and a list of top BCT requestor based off their request task counts. I was able to present my user flows as well as ask high level questions on their usage of TCM and if these designs would embrace the issues they currently faced. Based off 4 BCT requestor's feedback as well as continual insight from my team, I created changes on the landing page design as well as gained important information on potential issues that are out of my scope.
- I spent the last two weeks gearing myself towards the final presentation. Having the interaction design at a more refined state, I was able to work on the visual design, gearing my design towards the visual consistency of the other BCT Suite Tools and figuring out which specific content would be within the metadata tabbed tool. I began to create prototypes of these final designs and crafted my presentation. By the end, I was able to deliver end to end user flows on functionalities that TCM will offer to users in the role that TCM plays in the BCT workflow.

3. I worked on the 2020 Targeting Fixathon. I asked to have 6 tasks that ranged in low level to mid level design issues to update the ads manager.

- I was able to complete these six tasks in alignment with my POC for this project as well as the ENG that headed my tasks. I have continually answered questions regarding this project for further communication and strengthened my knowledge on the current geodesic components available.

I found my core project extremely interesting and I am extremely proud of the work I produced for the team.

- The project piqued my interest in how internally FB provides options for users to target their audience. As complex as the BCT request flow can be, gaining a better understanding of how the different options come to production and how much effort and specificity that goes into just one BCT really exercised my product thinking and allowed me to really consider how TCM would fit into the BCT puzzle. The departure from the request flow completely changed the landscape on the design process. Many prior use patterns and insights didn't apply as strongly when a tool that used to have two main purposes would now focus on one. For instance, many BCT requestors would say they would mostly focus their time on TCM on the "clusters section" to edit their query when in the new tool this option would now not even exist. I had to use my product thinking to now accommodate the TCM tool now not being used as a tool that would be used to look at existing BCTs as well as BCTs under review but fully focus on how to check the Being able to have the freedom to really decide how TCM would fit in the BCT flow was a huge task but an extremely fun task that allowed me to really consider a variety of options and flows before deciding on the ones that best catered towards user needs.
- **There are two big reasons why I am proud of my work.**
 1. Simply, it makes **people's lives easier**. Easily one of the most gratifying parts of this internship was when I interviewed a pair of BCT Requestors on the internal marketing team and their eyes lit up seeing the design. Even though they knew the design process wasn't even close to finished, they said that using TCM and requesting and finding BCTs consumes so much time and effort on their end and they couldn't wait for TCM and the other BCT Suite tools to go into production. As a young designer, hearing words of encouragement from genuine potential users was amazing. It made me confident that the work I was doing is impactful and continue to drive me throughout the entire internship.
 2. The work that BCT team does and the TCM support one of the many functionalities within ads manager and even ABP. I and I'm sure all of the designers on ABP hope to simplify and improve the advertisement creation process on FB and truly allow **businesses to get opportunities** they didn't have before or even know of before. I want businesses like my family's SMB to be able to thrive based off better digital outlets to showcase their hard work and products and I know TCM plays a small but important part in that.

How was your overall experience this term? Did you learn skills that you'll be able to apply to your career? What did you like most, least? Would you recommend Meta to your friends? If you came back, what would you like to work on?

I really enjoyed my overall experience this term.

- Despite the ongoing pandemic, the entire FB structure from my manager, the recruiters, and my team's PM did a fine job checking on my needs on a daily basis and guiding me towards the right path to completing my projects and my experience here.
- My manager really set up clear and valid expectations and project plans from the beginning and continued to update and check on me during the internship on if there's anything else she can do to boost my internship experience and give me guidance when I needed help to progress forward. My PM continued to make time for the interns and even tried to give me extra feedback when critique time ran out despite his schedule. The Targeting Team and the TCM team both supported me during meetings, alignments and feedback sessions all the way up to now. I really appreciated my TCM team and especially Silu Chen for spending hours for the first couple of weeks to really make sure I understood TCM's context and where the other tools will fit into the workflow.
- As stated before, I really enjoyed my projects and can confidently say it matched the type of work I wanted to do at Facebook.

I liked my manager's cohesion and workflow the most. I liked design camp the least.

- My manager's feedback has always been straightforward and actionable items I can improve on as a designer. During the midpoint review, my manager highlighted that one aspect that I can improve on is to fully expand on the visual design and create more diverse iterations. I took that to heart and tried to expand my iterations on ways that my designs can embrace the needs of users in different ways. This really helped me craft the interaction and visual design patterns and I felt as if it overall improved the project experience. While it is something I am currently working on and will continue to work on, it guided me towards the right direction when creating the overall layout of the landing page, the breakdown of the search experience, and binding the consistency with the other tools. For instance, when I was creating the search experience, I was so focused on creating a search experience that didn't adopt the custom segment list area (an exhaustive list of all BCTs) but with Vivian's feedback I was able to pick apart what was valuable from the custom segment list and what wasn't and integrate that into a more simplified, efficient search process that prioritized the traditional keyword search but also incorporate browsing as a secondary option.
- I felt as if the design camp could better embrace the knowledge and skills needed to design at Facebook. I felt much of the information was relatively broad and especially with WFH, there were definitely points of improvement in the onboarding experience such as specific program early on to review the internal design tools and such.

I definitely learned skills that I could apply to my career

- This was the first time I tackled a project of this scope and it really trained my product thinking. I gained a better understanding of the vertical structure of tools and how tools can lead to other supplementary tools but also how tools collectively fit to create one, more holistic, better user experience. I also learned how to direct my design to better fit within a developing design language and create visual consistency. Finally, I learned how to work on an expanded team with much higher

resource availability and that continual alignment and updates creates easier communication and translation of work. All of these can be adapted in any work or professional situation.

Yes, I would recommend FB to friends and if I came back, I would love to work on the projects that my team works on currently, but also would love the opportunity to work on specific tools and processes that supports SMBs.

- I would definitely recommend friends to FB (already have to potential talents through referrals) for the transparency that FB provides in all areas of the workflow but also the "build fast / create value" culture and attitude that FB has.
 - I really enjoyed the work that I did on supporting the functionalities available on ads manager and would be extremely grateful to work there again. As stated before, I really enjoyed my projects and my team's culture. However, I would also really enjoy working on current explorations and projects that directly support SMBs to showcase their work / brand and that simplify the advertisement process for them especially with their reduced resource availability to direct towards marketing. During a coffee chat with a Business Family Foundations Team designer and his work on BizApp and how its consolidating advertisement experience from both FB Web and IG, I really enjoyed how he said that the work is really enabling SMBs to create advertisements more easily and that stories from their experience really drives him. It would be great to work on a team similar to his that really supports SMBs.
-
